

# HONEYWELL VERSATILIS™ TRANSMITTERS

Honeywell

Honeywell Versatilis™ transmitters unlock the possibilities for condition-based monitoring of rotating equipment, including pumps, motors, compressors, fans, blowers, and gearboxes.

**CONDITION MONITORING OF MOTORS AND PUMPS**

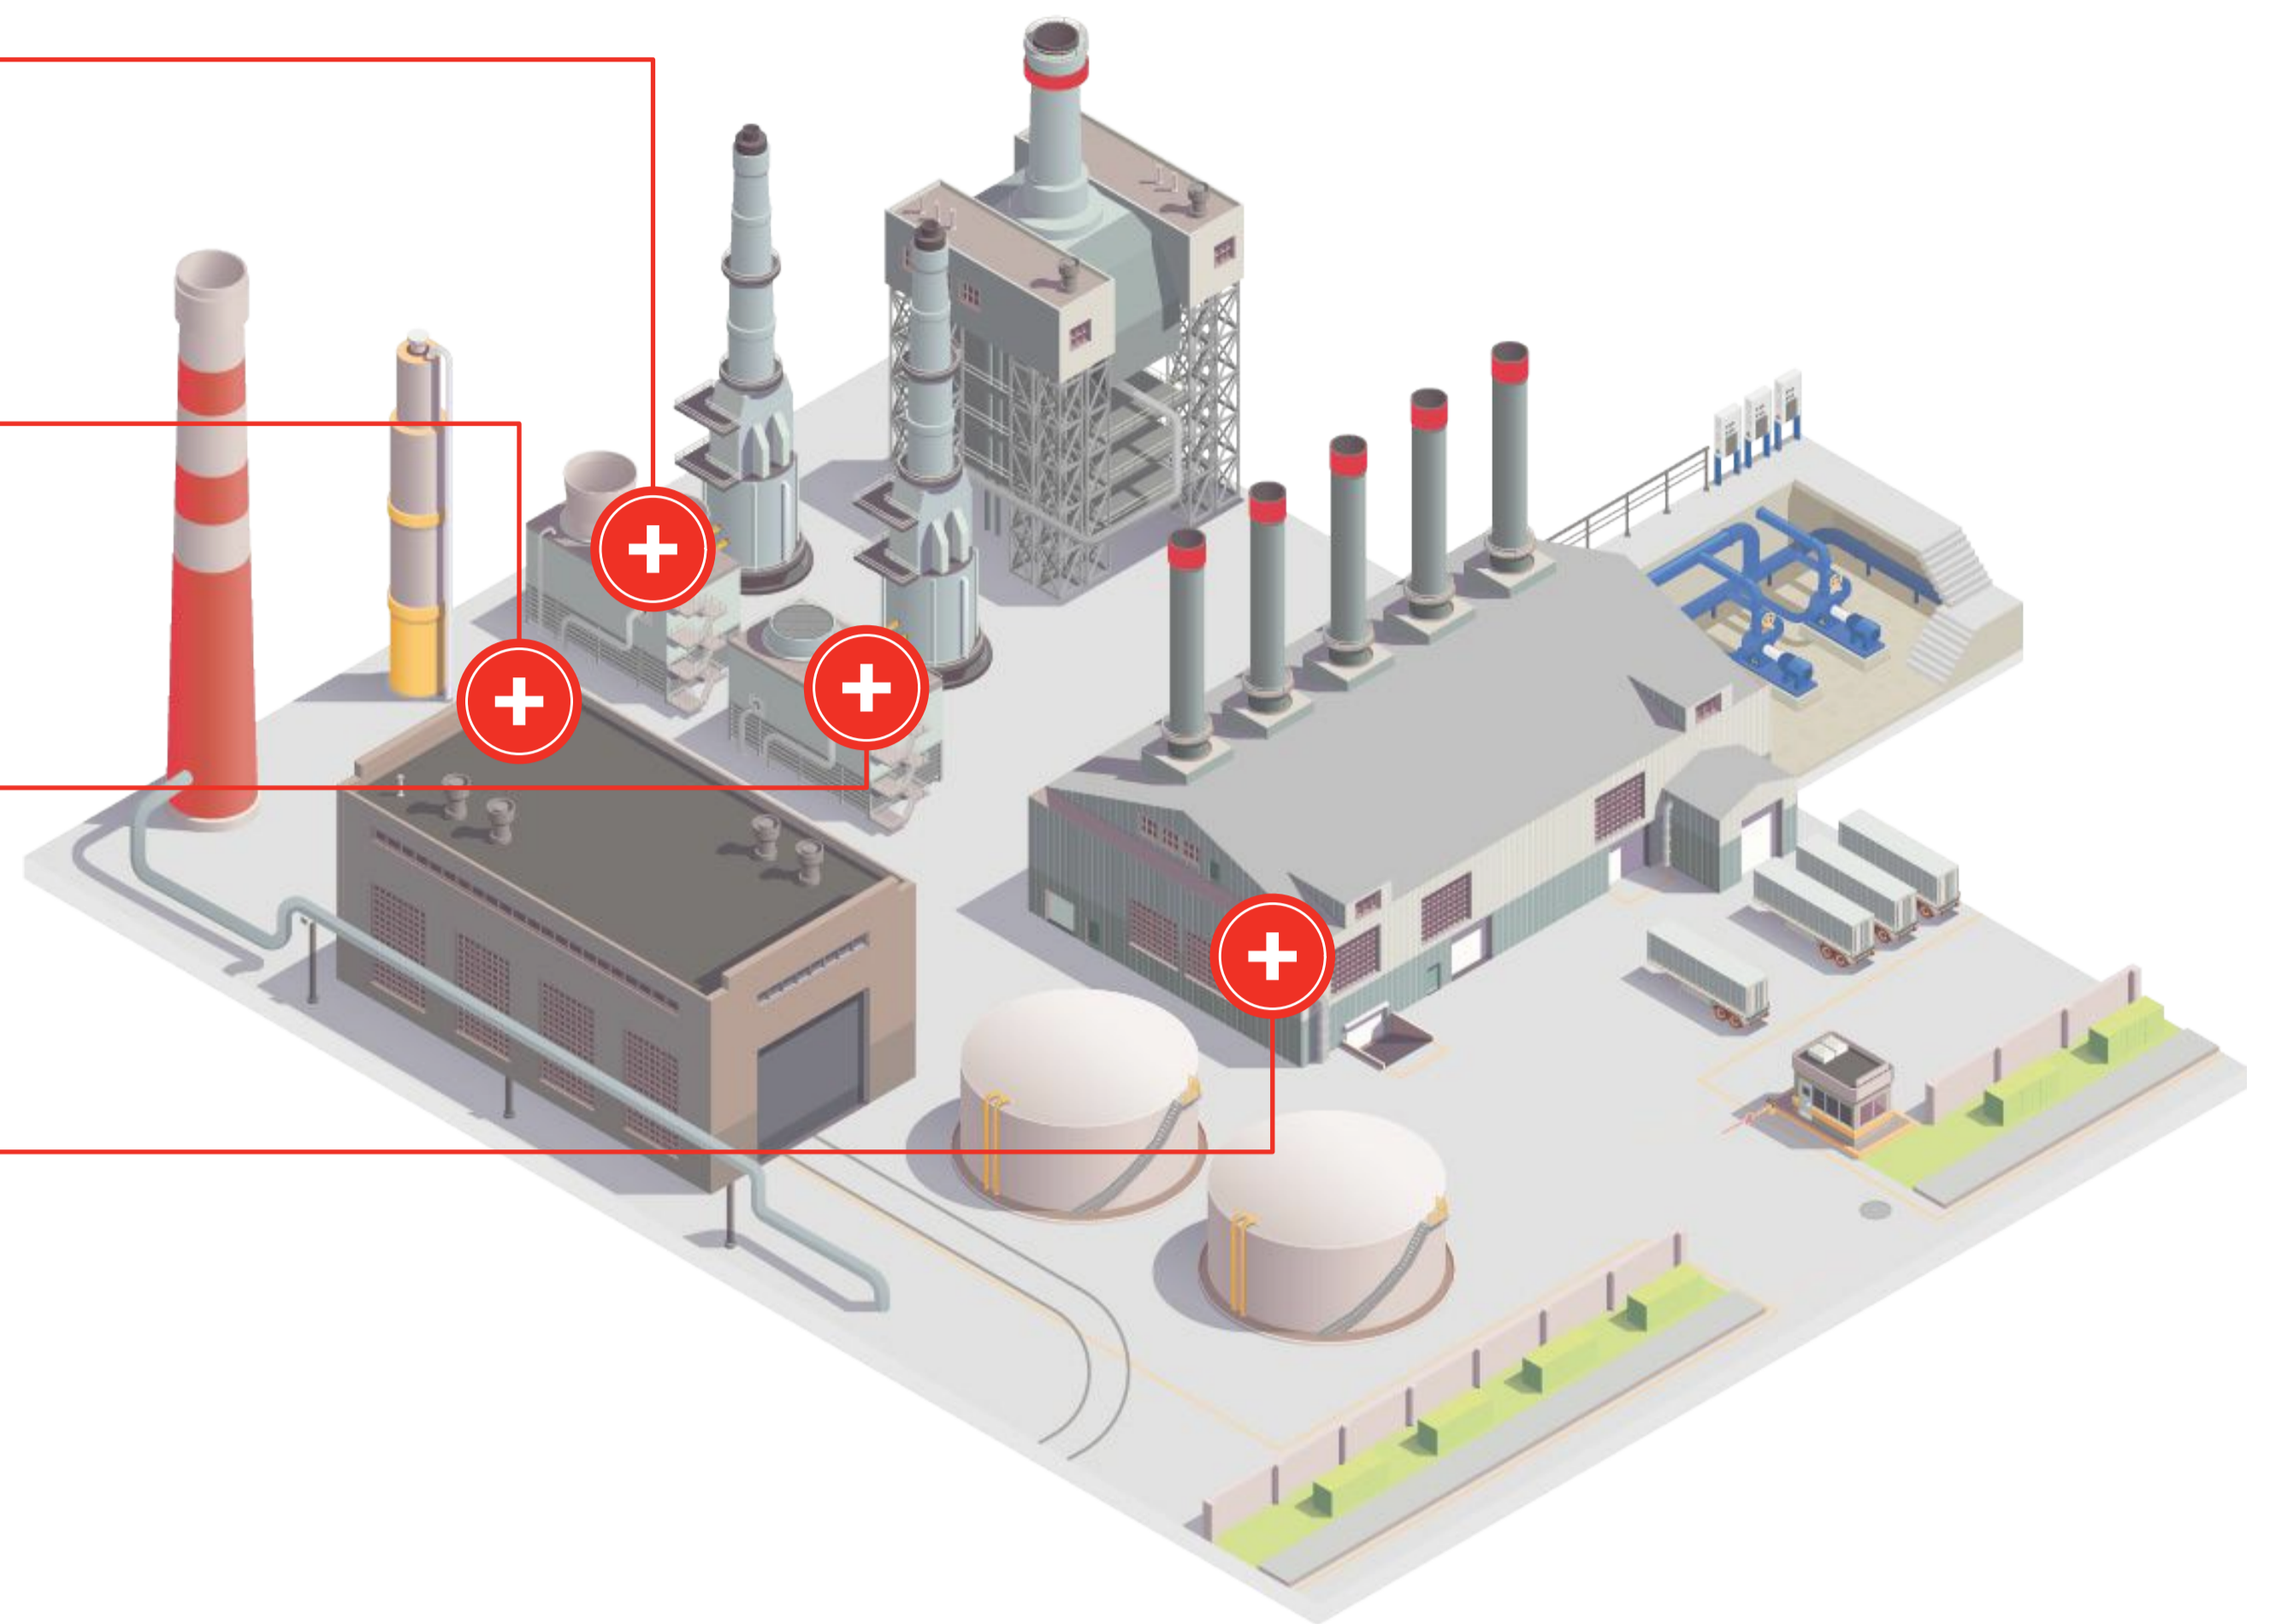

**AUTOMATE MANUAL READINGS**

**CONDITION MONITORING OF FANS AND BLOWERS**

**MONITORING AMBIENT CONDITIONS OF LIFE SCIENCE FACILITY**

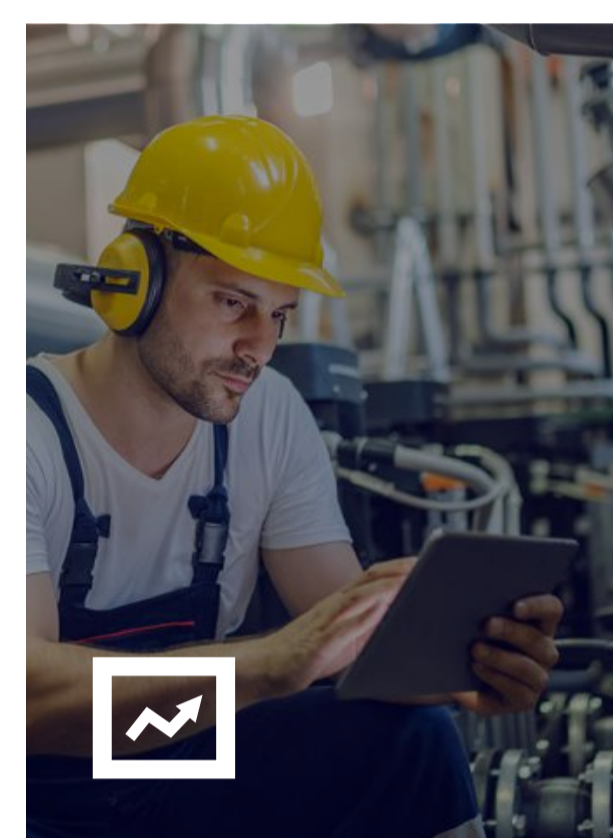

## Customers want

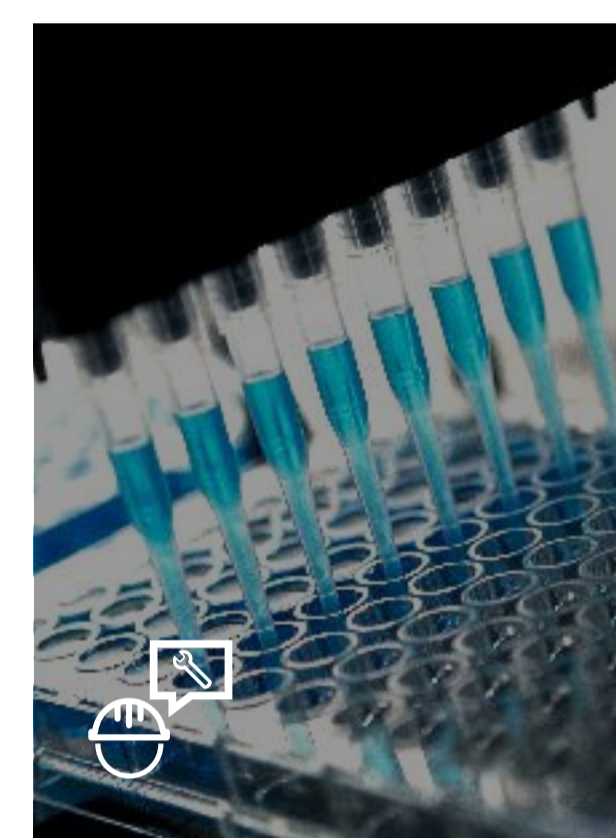

With most major economies adopting net Zero targets, emissions monitoring for greenhouse gases has become a priority for manufacturing facilities.

At manufacturing facilities, up to 40% of unplanned down time are caused by equipment failures. Unexpected equipment failures can result in millions of dollars of financial losses.

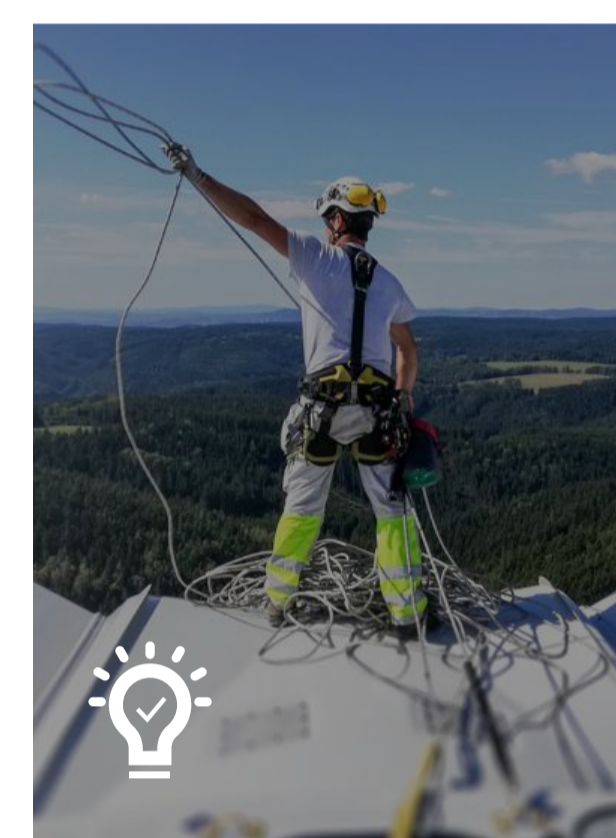

Manual inspection of equipment is not only expensive but also leads to human errors, worker fatigue and expose workers to hazardous conditions. In life science facilities key parameters including humidity and room temperature are often manually monitored.

Maximize uptime

Reduce manual intervention

Operate sustainably

### FEATURES

Ambient Temperature

Relative Humidity

Surface Temperature

Barometric Pressure

Acoustics

3 Axis Vibration

### BENEFITS

On premises as well as cloud instance, open architecture giving user flexibility

Honeywell Versatilis™ Platform for environment emissions and remote equipment monitoring

Enable Autonomous as well as Sustainable Operations

Local Technical Support

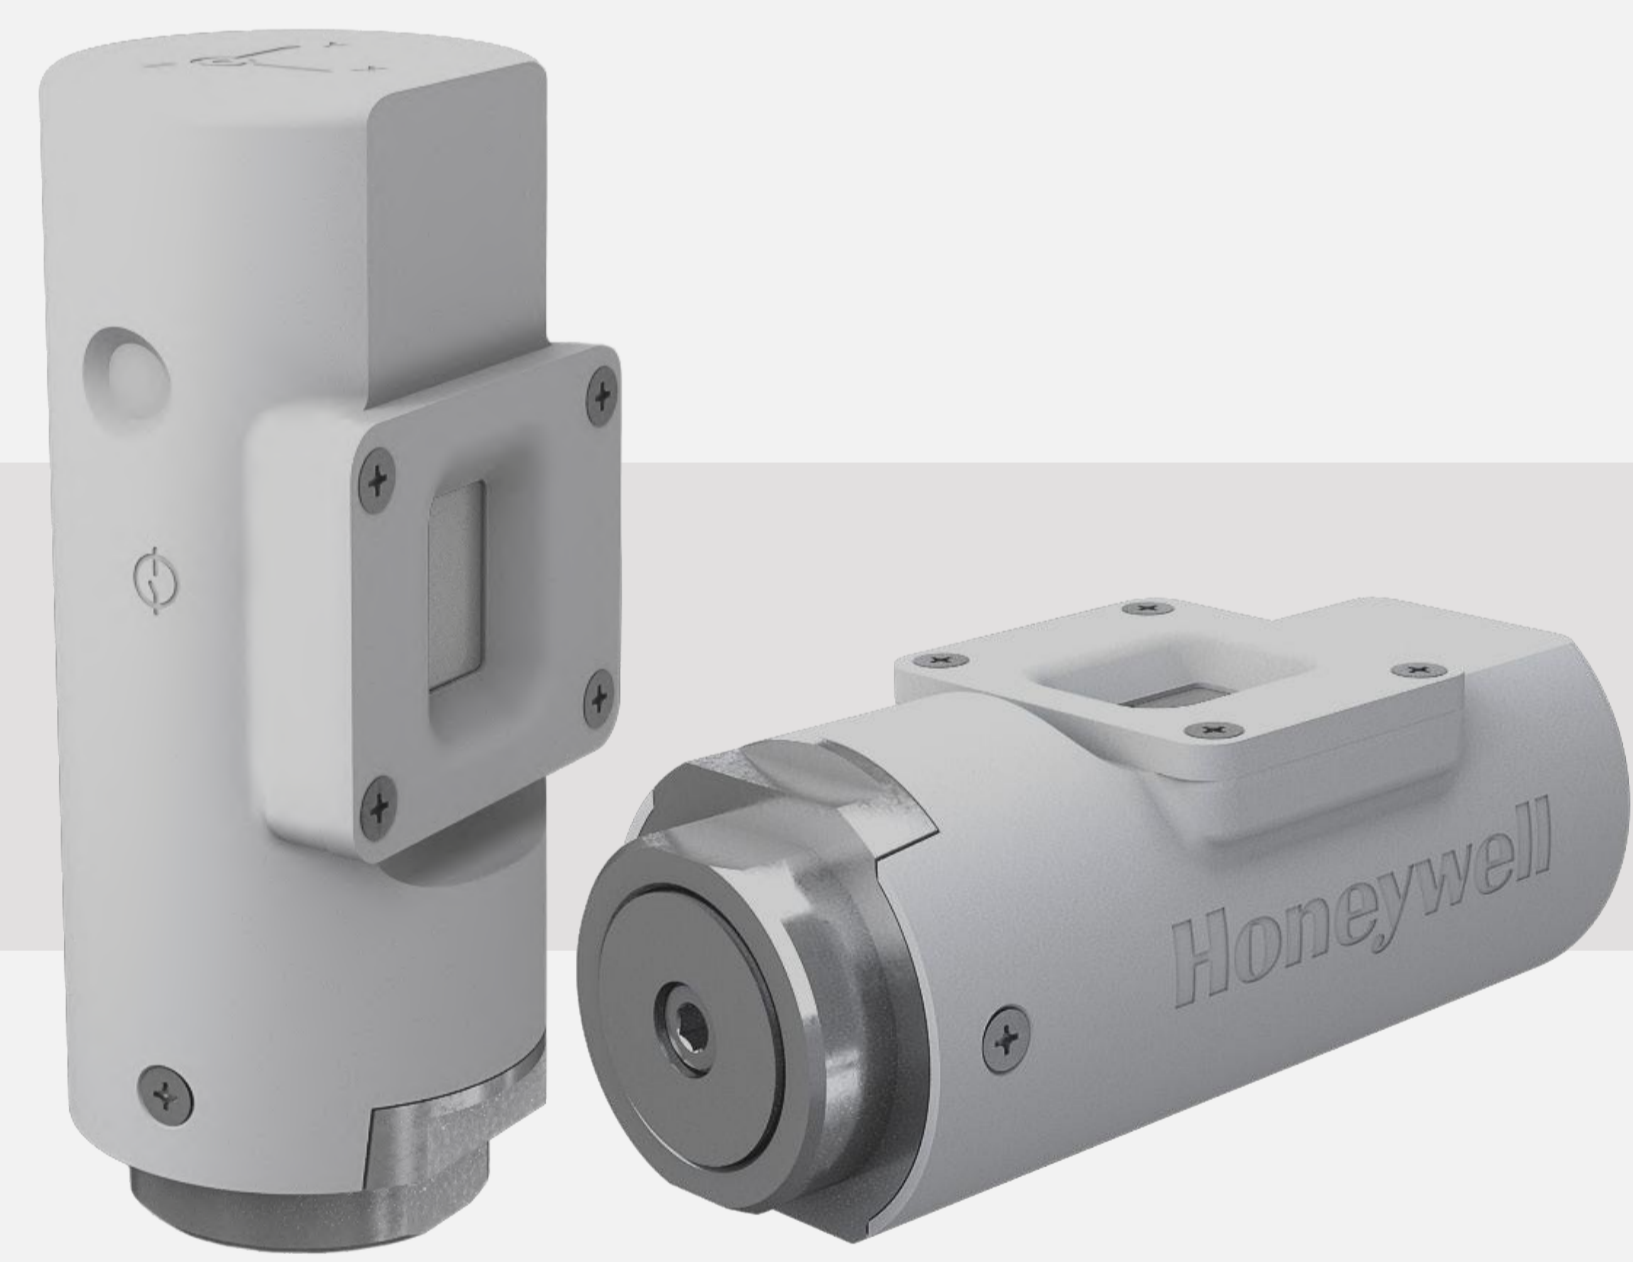

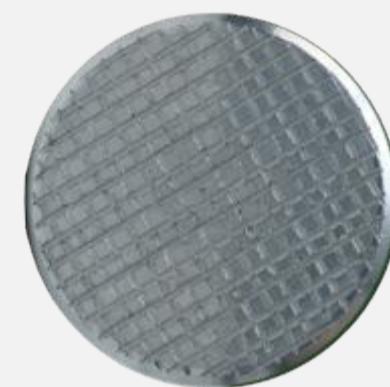

5 year battery life leading to lowest lifecycle cost

### EASY TO MOUNT

Magnetic Adapter

Adhesive Adapter

Threaded Adapter

CONNECT

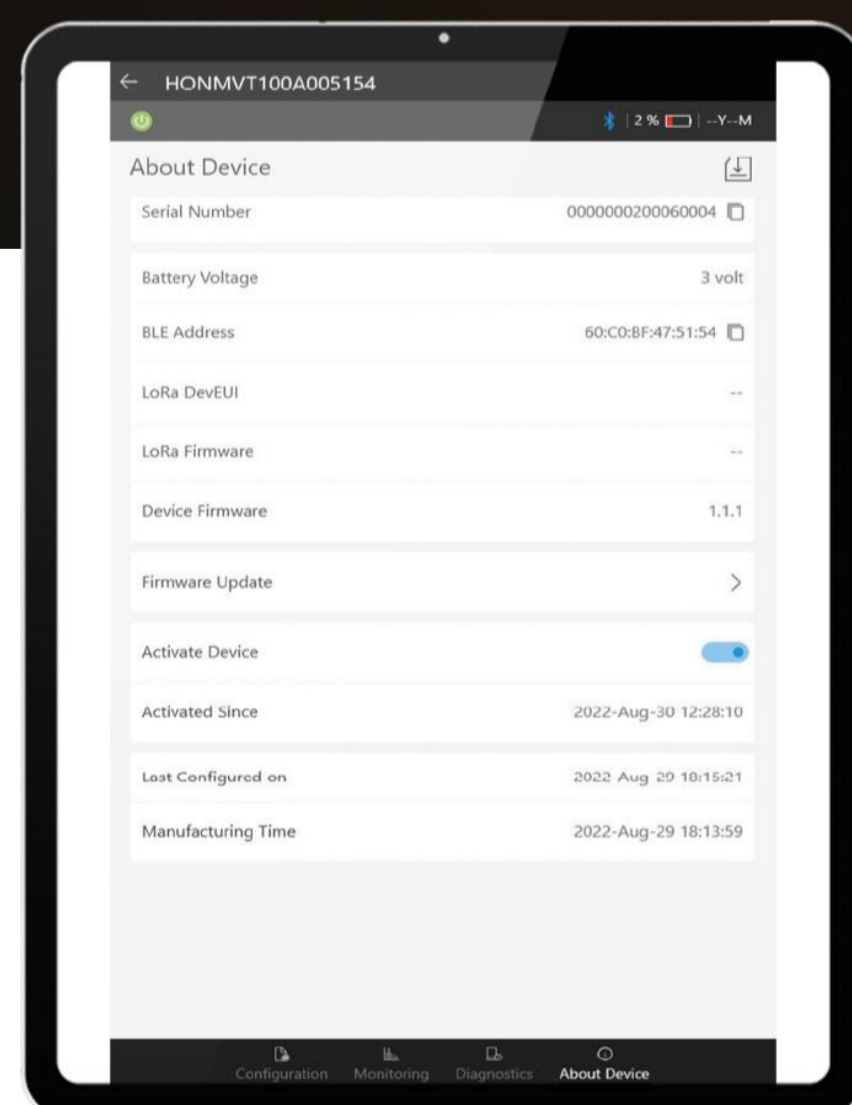

Honeywell Versatilis™ transmitter can be configured through Honeywell Versatilis Connect through Bluetooth® in minutes.

The tool can be used to connect, configure, set limits, view live as well as historical data.

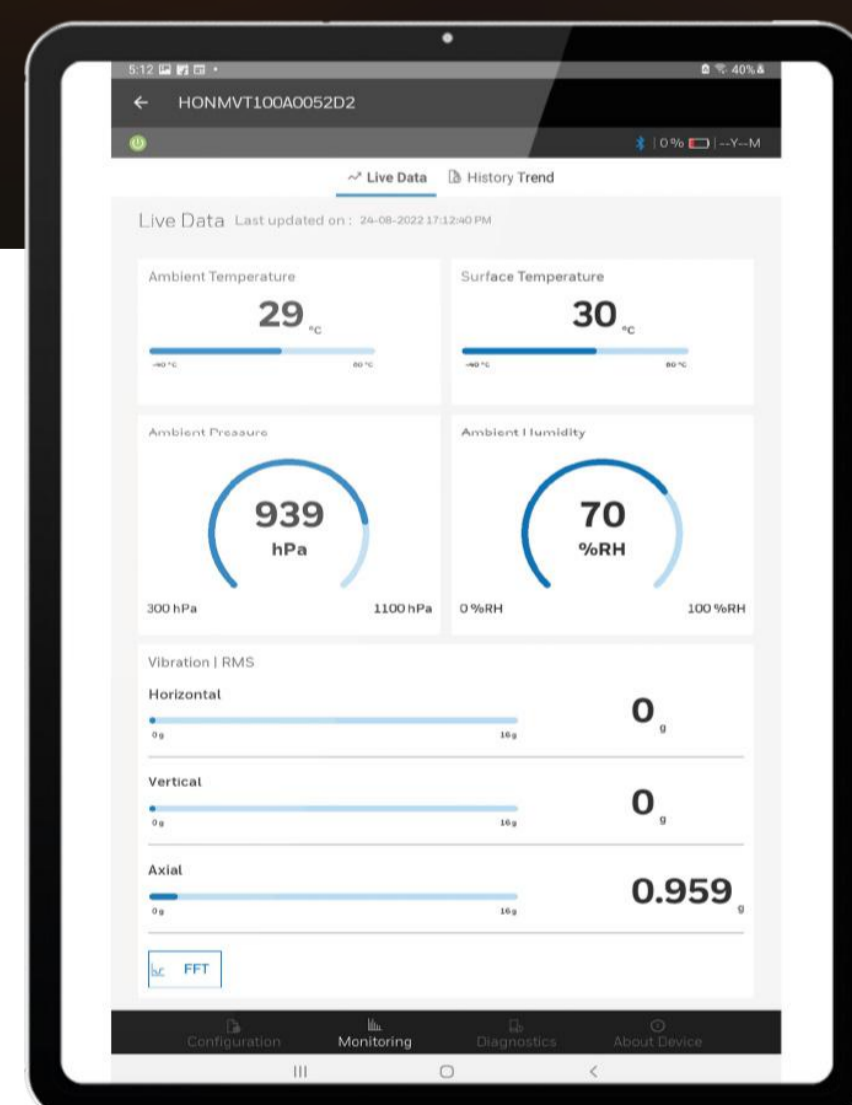

The configurator application is capable of running on mobile devices and tablets supporting IOS, Android and Windows operating systems.
