

SUSTAINABLE FUELS FOR CLEAN SKIES

Honeywell Carbon-Neutral Sustainable Aviation Fuel Technology

COMPREHENSIVE HYDROGEN SOLUTION TO PRODUCE LOW-CARBON FUELS

* When using a feedstock such as used cooking oils, lifecycle GHG emissions can be reduced by 60-80% at this stage compared to lifecycle analysis for petroleum fuel processing.

** The byproducts of the UOP Ecofining process technology are used to produce renewable hydrogen, reducing lifecycle GHG emissions by another 10%.

*** The carbon dioxide (CO₂) that is generated from the production of the hydrogen can be captured and routed for permanent underground sequestration, further reducing lifecycle GHG emissions by an additional 6-10%.
